

Playground Projects

Explore all of Statsig's capabilities in a protected environment—no data warehouse connection required. Learn more about Playground Projects and how to get set up today.

What are Playground Projects?

Statsig Playground Projects are hosted environments that enable enterprise teams to evaluate Statsig without connecting their own data warehouse or implementing additional code.

A more secure way to evaluate

We understand that organizational processes and data pipeline requirements can often delay experimentation platform evaluations. Playground Projects allow you to explore all of Statsig's full product functionality with minimal setup.

With Statsig Playground Projects, you get:

Full access to Statsig Warehouse Native

Run experiments, define metrics, and analyze data. Explore advanced features like CURE, sequential testing, dimension breakdown, and ID resolution.

Your data, our infrastructure—at zero cost

We host the datasets of your choice. Simply upload your desired metrics and exposure data as CSV files; no additional engineering lift or compute costs required.

Control over your data; no warehouse connection needed

All analysis happens only on the data that you choose to upload to your Playground Project, without the need for egress or integration.

Accelerated platform evaluation

Get hands-on with Statsig in minutes, not weeks. Learn how Statsig supports your experimentation needs through a real trial.

Ready to try?

Let your sales rep know and we'll create a Playground Project for you. We'll also guide you through next steps so you can start exploring key workflows and unlocking growth even faster.
